

PHASE-LOCKED CRYSTAL OSCILLATORS

Model PLOX Features

- Fixed frequencies: 10 - 1400 MHz
- Very low phase noise
- Spurious: -80 dBc
- Harmonics: -30 dBc
- Internal TCXO (0.5± PPM) or phase-locked to an external reference
- Low cost

STANDARD PLOX

PLOX WITH xN MULTPLIER

Block Diagram

Description

Multiplied low noise crystal oscillators offer the lowest phase noise frequency sources available. The new series PLOX are high quality crystal oscillators multiplied to any desired frequency between 10 and 1400 MHz. These units offer excellent phase noise and harmonic and sub-harmonic performance.

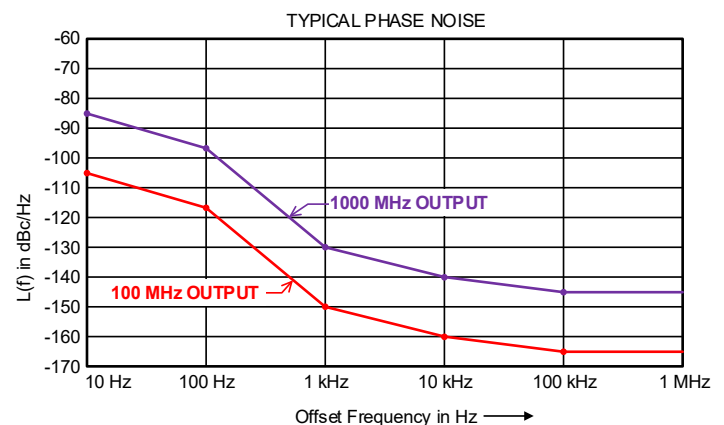

The output frequency from these units can be phase-locked to an input reference frequency or the unit can

be configured with an internal TCXO. These units offer many options and can easily be customized to a specific requirement.

The PLOX is a rugged and economical solution for many demanding communication and instrumentation applications.

Key Specifications

Output Frequency:	10 – 1400 MHz
Stability and Accuracy:	Same as input or ± 0.5 PPM
Phase Noise:	As shown in plot
Spurious (typ.):	-80 dBc
Harmonics (typ.):	-30 dBc
Output Power (min.):	+13 dBm
Input Reference Freq.:	5 MHz, 10 MHz or Custom
Power Requirements:	+5.0 Vdc @ 350 mA
Temperature Range:	-10°C to +70°C
Size:	2.25" x 2.25" x 0.60" 2.25" x 2.25" x 1.17" (with xN)
